The cover features a dark blue background with a grid pattern and a photograph of a power transmission tower against a cloudy sky. A pink banner at the top left contains the title. In the lower right, there is a line graph with several upward-pointing arrows, and a vertical arrow pointing upwards.

APEC
ENERGY HANDBOOK 2004

ENERGY WORKING GROUP
DECEMBER 2006

COORDINATING AGENCY:
THE ENERGY DATA AND MODELLING CENTER
THE INSTITUTE OF ENERGY ECONOMICS, JAPAN

Asia-Pacific
Economic Cooperation

Preface

APEC Energy Handbook 2004 is a handy, pocket-sized summary of key energy data and a supplement to APEC Energy Statistics 2004 which has been released at November 2006 from APEC Secretariat in Singapore.

This handbook consists of the following parts:

1. Primary Energy Supply
2. Transformation
3. Final Energy Consumption
4. Energy Balances
5. Outlook
6. Energy Indicators

The Supply part describes Total Primary Energy Supply by energies while Transformation part shows Oil refining and Power Generation. The Consumption part indicates both Final Energy Consumption by Sectors and Consumption by fossil energies. The Energy Balances part includes regional energy balance tables while Outlook part shows projected energy demand by year 2020 under a BAU (Business As Usual) case which was prepared by Asia Pacific Energy Research Centre as of September 2002. The Energy Indicators part contains several indicators based on Population, GDP and Energy consumption amount.

This handbook has been derived from the APEC Energy Database, the purpose of which is to establish a comprehensive and consistent energy database within the APEC region. This database will be used to assist in the identification of significant trends in energy supply and demand consistent with projects and priorities under the APEC Energy Working Group. It has been prepared in close cooperation with twenty-one member economies.

Inquiries about figures and graphs in this handbook could be addressed to The Energy Data and Modelling Center, The Institute of Energy Economics, Japan.

Primary Energy Supply

Total Primary Energy Supply by Energy APEC 20

The chart illustrates the growth of total primary energy supply in APEC 20 from 1990 to 2004. Coal++ remains the largest source, followed by Oil. Gas++ shows a significant increase over the period. Nuclear, Hydro, and Others represent smaller but growing shares of the total supply.

Primary Energy Supply

Total Primary Energy Supply by Energy Oceania

The chart illustrates the composition of primary energy supply in Oceania from 1990 to 2004. Coal++ is the dominant source, followed by Oil and Gas++. Hydro and Others contribute smaller, relatively stable shares. The total supply shows a steady upward trend over the period.

Indigenous Production of Coal APEC 20

The chart displays the indigenous production of coal in Mtoe for APEC 20 from 1990 to 2004. The total production grows from approximately 1,230 Mtoe in 1990 to 1,823.2 Mtoe in 2004. China and the United States are the dominant producers, with China's share increasing significantly over the period.

Indigenous Production of Natural Gas APEC 20

The chart displays the indigenous production of natural gas in Mtoe for APEC 20 from 1990 to 2004. The total production shows a steady increase over the period, with the United States consistently being the largest producer. Other significant producers include Canada, Indonesia, Malaysia, Mexico, China, Australia, and Others.

Indigenous Production of Nuclear Power APEC 20

The chart displays the indigenous production of nuclear power in TWh for APEC 20 countries from 1990 to 2004. The y-axis represents TWh, ranging from 0 to 1,600. The x-axis represents the year. The bars are stacked by country, with the United States (blue) and Japan (purple) being the largest contributors. The total production shows a general upward trend over the period.

Electricity Power Generation by Type APEC 20

The chart displays the growth of electricity power generation in APEC 20 from 1990 to 2004. The y-axis represents TWh, ranging from 0 to 10,000. The x-axis shows years from 1990 to 2004. The bars are stacked by type: Thermal (red), Hydro (blue), Nuclear (orange), Geothermal (cyan), and Others (green). Thermal generation shows a steady increase, while Hydro also grows significantly. Nuclear, Geothermal, and Others represent smaller but growing shares of the total.

Total Final Energy Consumption by Sector Oceania

The chart shows a steady increase in total final energy consumption in Oceania from 1990 to 2004. The total consumption grows from approximately 68.2 Mtoe in 1990 to 89.1 Mtoe in 2004. The sectors contributing to this growth are Industry, Transport, Residential/Commercial, and Others, with Transport showing the most significant increase in its share over the period.

Total Final Energy Consumption by Sector United States of America

The chart shows a steady increase in total final energy consumption from approximately 1,307 Mtoe in 1990 to 1,594 Mtoe in 2004. The Transport sector (blue) shows a significant increase over the period, while the Industry sector (red) shows a slight decrease. Residential/Commercial (yellow) and Others (green) sectors also show growth.

Gas++ Demand by Sector APEC 20

The chart displays the demand for gas in APEC 20 from 1990 to 2004, broken down by sector. The total demand shows a steady upward trend, starting at approximately 406 Mtoe in 1990 and reaching 503.6 Mtoe by 2004. The Industrial sector is the largest consumer, followed by Residential/Commercial, Transport, and Others.

Note: Chinese Taipei is not included in the CO₂ Emission per Real GDP (1995 PPP) of APEC 19, APEC 21 and East Asia.

Glossary

General note

For editing convenience the definition for some items with “++” mark are different with APEC Energy Statistics 2002. In the Energy Balance sector the definition for all item are same as APEC Energy Statistics 2002.

Energies

Coal++

Defined as coal in narrow sense (all primary coal such as hard coal, lignite and brown coal) plus coal products (all fuels derived from coal including patent fuel, coke oven coke, gas coke, briquettes, coke oven gas and blast furnace gas).

Coal

Coal includes all primary coal, such as hard coal, lignite and brown coal.

Coal Products

Coal Products includes all fuels derived from coal including patent fuel, coke oven coke, gas coke, briquettes, coke oven gas, blast furnace gas and gas works gas.

Oil

Defined as crude oil (which comprises crude oil, refinery feedstocks and natural gas liquids and Natural LPG) plus petroleum products.

Crude Oil

Crude Oil comprises crude oil, refinery feedstocks and natural gas liquids.

Petroleum Products

Total of all petroleum products, such as LPG, naphtha, MOGAS(including AVGAS), jet fuel, kerosene, diesel oil, fuel oil, refinery gas and other petroleum products.

Mogas

Mogas is light hydrocarbon oil for use in internal engines such as motor vehicles. Motor gasoline is distilled between 35 °C and 215 °C and treated by reforming, catalytic cracking or blending with aromatic fraction to reach a sufficiently high octane number (≥80 RON).

Naphtha

Naphtha includes light or medium oils, a cut covering the end of the motor spirit and the beginning of the kerosene range. Naphtha distills between 30 °C and 210 °C.

Jet Fuel

Jet fuel comprises both gasoline and kerosene type jet fuels meeting

specifications for use in aviation turbine power units.

Gasoline type: This includes all light hydrocarbon oils, distilling between 100 °C and 250 °C. It distills at least 20 percent in volume at 143 °C.

Kerosene type: This medium oil with same distillation characteristics and flash point as kerosene, with a maximum aromatic content of 22 percent in volume, and treated to give a kinematic viscosity of less than 18cST at -20 °C (and a freezing point below -47 °C), octane number varying from 80 to 145 RON.

Kerosene

Kerosene comprises refined petroleum distillate intermediate in volatility between gasoline and gas/diesel oil. It is a medium oil distilling between 150 °C and 300 °C, which distills at least 65 percent in volume at 250 °C. Its specific gravity is in the region of 0.80 and the flash point is above 38 °C.

Diesel Oil

Diesel oil includes heavy gas oils. Gas oils are obtained from the lowest fraction from atmospheric distillation of crude oil, while heavy gas oils obtained by vacuum redistillation of the residual from atmospheric distillation.

Fuel Oil

Fuel oil defines oils that make up the distillation residue. It comprises all residual fuel oils (including those obtained by blending). Its kinematic viscosity is above 10 cSt at 80 °C. The flash point is always above 50 °C. and the density is always more than 0.90.

LPG

LPG is the light hydrocarbon fraction of the paraffin series, derived from refinery processes and from crude oil stabilization plants comprising propane (C₃H₈) and butane (C₄H₁₀) or a mixture of these two hydrocarbon.

Others

The category, "Other petroleum products", groups together white spirit and SBP, lubricants, bitumen, paraffin waxes, refining gas and others (tar, sulfur, grease).

Gas++

Defined as natural gas and LNG.

Natural Gas

Natural gas consists mainly of methane occurring naturally in underground deposits associated with crude oil or gas recovered from coal mines (colliery gas). Sewage gas is also included.

LNG

LNG is liquefied natural gas.

Glossary

Hydro

The primary equivalent is calculated with an efficiency of 100%.

Nuclear

The primary equivalent is calculated with an efficiency of 33%.

Others

Defined as sum of geothermal power, wind, tide, photovoltaic power, etc.

The primary equivalent is calculated with an efficiency of 100% except for of geothermal power, which assumed efficiency is 10%.

Sectors

Indigenous Production

Quantities of fuels extracted within the economy.

Net Imports

Defined as imports minus exports.

Total Primary Energy Supply (TPES)

Defined as indigenous production plus imports minus exports minus international marine bunkers plus or minus stock change.

Refining

Petroleum refineries shows the transformation of crude oil, NGL and condensate to petroleum products. The production of synthetic petrol from natural gas is also included.

Power Generation

Gross electricity (including power stations' own use) produced from thermal, hydro, nuclear, geothermal and other power plants of public utilities and auto-producers. An auto-producer is an establishment which, in addition to its main activities, generates electricity wholly or partially for its own use, such as industries, railways, refineries, etc.

Total Final Energy Consumption

Defined as industry plus transport plus residential and commercial plus others sector.

Industry

Consumption of the industry sector is specified in the following sub-sectors (energy use for transport by industry is not included here but reported under transport):

- Iron and steel industry
- Chemical industry
- Non-ferrous metals basic industries
- Non-metallic mineral products such as glass, ceramic, cement, etc.
- Transport equipment
- Machinery. Fabricated metal products, machinery and equipment other

=66x48+0+0

=66x48+0+162

114

- than transport equipment
- Mining (excluding fuels) and quarrying
- Food processing, beverages and tobacco
- Pulp, paper and printing
- Wood and wood products (other than pulp and paper)
- Construction
- Textiles and leather
- Collection, purification and distribution of water
- Non-specified (any manufacturing industry not included above)

Transport

Consumption of the transport sector covers all transport activity regardless of the economic sector to which it is contributing, and is divided into the following sub-sectors:

- Air transport (international and domestic)
- Road transport
- Railways
- Internal navigation (including small craft and coastal vessels not purchasing their bunker requirements under international marine bunker contracts).

Residential and Commercial

Defined as residential plus commercial.

*Residential shows all consumption by households

*Commercial shows consumption of the commercial and public sectors.

Others

Agriculture and non-energy use sectors are included.
